Career Objective

Ambitious and detail-oriented BComp Data Science student (3rd Year in 2025) with a strong foundation in programming, data analysis, and IoT development. Passionate about applying technology to solve real-world challenges in fields such as sustainable agriculture, education, and environmental monitoring. Seeking an internship opportunity where I can contribute technical expertise, creativity, and problem-solving skills while gaining hands-on industry experience.

Skills

Programming & Development: C#, HTML, CSS, JavaScript, SQL | Familiar: Python, Arduino (IoT), Node-RED, Talend
Tools & Frameworks: Visual Studio, VS Code, Git/GitHub, SQL Server, Firebase (basic), Oracle (beginner), Access
IoT & Circuit Design: Arduino, Tinkercad, Cirkit Designer
Data Analysis & Visualization: Excel, Power BI, Statistics
Other: UI/UX design principles, Agile project practices
Soft Skills: Problem-solving | Adaptability | Teamwork | Communication | Detail-oriented | Leadership | Critical thinking | Time management | Continuous learning | Conflict resolution
Languages off communication: English - Advanced (fluent) and Afrikaans - Basic

Education

BComp in Data Science | Belgium Campus ITversity – Pretoria
2023 – 2026 | Graduation: Early 2027

National Senior Certificate (Matric) | Laudium Secondary School – 2021

Academic Highlights

- Developed CRUD applications using C# and SQL, gaining practical experience in database management and backend programming.
- Built responsive websites with HTML, CSS, and JavaScript, applying modern design principles to ensure usability across devices.

- Excelled in project-based learning, consistently contributing to team projects that emphasized real-world application of software engineering concepts.
- Applied data analysis and visualization tools to interpret datasets and present clear, actionable insights.

Projects & Experience

BusIT Week 2024 – *Smart Hydroponics System Sensor Integration*

- Designed and integrated sensors to monitor water level and pH in a hydroponics control system.
- Calibrated sensors to deliver accurate data, enabling automation and stability.
- Collaborated in an international team under real-world constraints using agile practices.

SRC Head of Finance (2024)
Belgium Campus ITversity – Pretoria

- Elected as Head of Finance on the Student Representative Council.
- Managed budget planning, financial reporting, and allocation of student funds.
- Coordinated with student committees to ensure transparent and efficient use of resources.
- Strengthened skills in leadership, accountability, and organizational management.

Penn State 2025 – International Engineering Project
Smart Hydroponics System with Dashboard & Educational Platform

- Co-developed a smart hydroponics system with real-time monitoring via a Node-RED dashboard.
- Configured sensors and control logic for automated water and nutrient adjustments.
- Built an educational website for primary school learners to simplify hydroponic and sustainability concepts.
- Strengthened skills in IoT integration, web development, and cross-cultural teamwork.

Role-Based POS & General Management System
C# Windows Forms Application for Trailer Rental Business

- Developed a custom POS system with modules for stock management, user authentication, sales recording, and finance tracking.
- Implemented hybrid storage using file-based systems and SQL databases.
- Delivered a user-friendly UI and scalable system for real-world business use.

Global Acting in IT Minor (2025 Academic Year – Europe)
International Academic Exchange & Environmental IT Project

- Selected for study across multiple universities: Fontys (Netherlands), University of Lleida (Spain), FH Oberösterreich – Hagenberg (Austria), Hasselt University (Belgium), Belgium Campus (South Africa).

- Focus areas: Immersive Tech, UX Design, IoT, AI, and Data Science.
- Working on a project addressing South Africa's water quality challenges through innovative IT solutions.

Why Me for This Internship?

I bring a strong mix of technical expertise and global collaboration experience, demonstrated through projects like BusIT Week 2024, the Penn State 2025 smart hydroponics system, and the Global Acting in IT Minor. Skilled in IoT, system design, and data visualization, I thrive in diverse teams, stay dependable under deadlines, and approach challenges with a problem-solving mindset. I am eager to contribute creativity and dedication while expanding my professional skills.

Hobbies & Interests

Sustainable farming | Agriculture technology | Vintage car restoration | Hiking | Exploring new technologies
